Professional Summary

Full Stack Developer with roughly 4.5 years of experience building, deploying and optimizing production web applications across the stack. Specialized in JavaScript, TypeScript, React and Node.js, with enterprise web application experience spanning authentication and loyalty platforms, offline-first desktop systems and multi-location inventory tools. Active adopter of AI-assisted development (GitHub Copilot, Gemini CLI, Opencode, Cline), using these tools daily to accelerate feature delivery, generate automated tests, and rapidly bridge the learning curve into new ecosystems such as PHP and Angular. Comfortable working end to end, from architecture to deployment, with solid Computer Science fundamentals and clean-architecture practices. Experienced in Agile environments, driving collaborative code reviews and mentoring junior developers.

Work Experience

Full Stack Developer **Nov 2023 – May 2026**
Siempre Farmacias *Argentina (Remote)*

- Designed and deployed end-to-end full-stack features for a high-traffic customer SSO and loyalty platform, managing secure registration, authentication and reward flows.
- Redesigned the customer registration journey into a multi-step dynamic flow with an interactive map API, increasing monthly new user sign-ups by 32%.
- Built complex frontend validations and conditional logic using React and TypeScript, reducing user input errors and support tickets by 23%.
- Engineered secure backend REST APIs with Express and Firebase Functions, implementing JWT authentication, CORS policies and secure transactional workflows.
- Developed an offline-first desktop checkout application (Electron + React + SQLite) with automated background synchronization, keeping checkout operations running through network drops.
- Used AI-assisted coding tools (GitHub Copilot, Gemini CLI, Opencode, Cline) to refactor legacy code, scaffold complex features and write unit tests, cutting development time by roughly 30%.
- Applied Clean Architecture and functional programming (fp-ts) principles to build a scalable, maintainable codebase, improving code quality and team velocity.
- Created and published a shared React component library documented with Storybook, reducing frontend development time for new features by 17% across multiple internal projects.
- Mentored two junior developers through pair programming and constructive code reviews, helping speed up their onboarding.
- Participated actively in Agile/Scrum processes – sprint planning, daily standups and retrospectives – to drive continuous workflow improvement.

Full Stack Developer (Contractor) **Aug 2023 – Jan 2024**
Restaurant Multi-Location Inventory System *Venezuela (Remote)*

- Architected a private, modular inventory management system for a multi-branch restaurant group to track stock across physical branches and a central warehouse.
- Owned the engagement end to end as a solo developer, driving client alignment, database architecture, frontend/backend engineering and deployment.
- Built dynamic, responsive dashboard interfaces using React giving restaurant managers real-time stock visibility, reducing inventory discrepancies by 18%.
- Developed a backend API using Node.js and PostgreSQL, optimizing database queries to reduce server response times by 22%.
- Used ChatGPT and Opencode for rapid UI scaffolding, CSS/Sass styling and automated unit testing, shrinking the prototyping phase from weeks to days.

- Integrated secure, multi-role authorization (Admin, Branch Manager, Warehouse Staff) to protect database write operations.
- Developed a responsive, public-facing landing page optimized for local SEO, contributing to a 25% increase in inbound franchise leads during the active project phase.
- Development is currently paused due to the client's budget constraints, with plans to resume.

Full Stack Developer (Freelance) **Feb 2022 – Aug 2023**
Healthcare Professional Portal *Colombia (Remote)*

- Directing the end-to-end design, development and continuous maintenance of a professional web platform for a medical specialist, including a secure patient-facing portal.
- Building a centralized NestJS backend to unify multi-clinic scheduling into a single source of truth, aiming to reduce appointment conflicts and administrative overhead.
- Leveraging AI coding assistants (ChatGPT and Cline) to accelerate NestJS boilerplate generation, schema validation and SQL queries, cutting initial API prototyping time by roughly 25%.
- Designing and integrating an automated patient notification workflow, laying the groundwork for an AI-powered WhatsApp assistant to reduce booking drop-offs.
- Implementing strict TypeScript data parsing pipelines for robust handling of patient medical documents and lab results.
- Utilizing CI/CD pipelines with GitHub Actions to automate releases and reduce manual deployment effort.
- Using AI tools to auto-generate API documentation and Swagger specs, saving several hours of manual writing per sprint.

Additional Experience & Mentorship

- **Technical Project Coordinator – Payá (Ride-Hailing Platform):** Facilitated communication and aligned technical priorities between executive management and the engineering team; helped unblock API and server-side dependencies for the development team, contributing to delivery of a fully functional MVP that the client ultimately did not launch publicly.
- **Programming Instructor – Independent:** Taught foundational programming (HTML, CSS, JavaScript, and programming logic) to two teenage students; one went on to independently build and sell HTML/CSS/JS websites at his school.

Education and Certifications

- Fullstack Software Development Bootcamp – Henry
- AI Development Foundations Certificate – BIG School
- CI/CD Bootcamp with GitHub Actions – Microsoft / CódigoFacilito
- EF SET English Certificate – C2 Proficient (Score: 76/100)

Technical Skills

- **Languages:** JavaScript, TypeScript, HTML5, CSS3
- **Frontend:** React, Angular (eager to learn), Vite, Redux Toolkit, Material UI, Sass, Storybook
- **Backend:** Node.js, Express, NestJS, PHP (eager to learn – Laravel), Firebase Functions, RESTful APIs
- **Databases:** PostgreSQL, SQLite, MongoDB, Firestore
- **AI-Assisted Development:** GitHub Copilot, Gemini CLI, Opencode, Cline, ChatGPT – context engineering, AI-assisted refactoring, automated testing, documentation generation
- **DevOps and Tools:** Git, GitHub Actions (CI/CD), Firebase, Vercel, Jira, Agile/Scrum
- **Practices:** Clean Architecture, Functional Programming, OOP, Mentorship, Code Reviews, Asynchronous Collaboration

Personal Projects

Developed multiple landing pages and product websites for healthcare, retail and food businesses, achieving an estimated 25% increase in inbound leads. Built demo projects integrating GraphQL APIs with Express and Firebase.
